

WHY CHOOSE SAVIOLI PRODUCTS?

1. All our wear and mechanical parts are exclusively made in our factory in Italy.
2. All wear parts, built in CAST IRON, are particularly wear resistant and therefore need less frequent replacement. That means a minimum of down-time.
3. Thanks to our CAST IRON hollow core sleeves long service life, the height of the void inside the hollow core slab remains the same, thus requiring less concrete for the making of the slabs (lighter slabs) meaning a minimum of down-time and saving on the cost of spare parts.

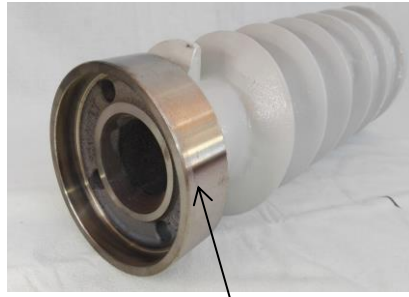

Excellent void forming into the slab

4. Our extrusion screws are made of special cast iron so the spiral pitch has a slower wear and tear and the extruder works at constant speed. That means a minimum of down-time and saving on spare parts.

Slow wear of the spiral pitch

- The centering ring cast inside the extrusion screw offers two main advantages : the first one is proper assembly of the extrusion screw (fixing) to the shaft and the second one is that the shaft is protected by the ring.
